## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

1. The term "highly" in claim 1 and 2 is a relative term which renders the claim indefinite. The term "highly" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

2. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The term selected in claim 1 does not relay the metes and bounds of the limits on the gas amount required.

3. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential steps, such omission amounting to a gap between the steps. See MPEP § 2172.01. The omitted steps are: it is unclear how the highly crystalline metal oxide nano-wires are created. Are there three steps? (exposing..., forming..., creating...) Maybe two? (metal and oxygen combination in a microwave plasma?). The examiner has assumed that one step is claimed and that the metals are treated in plasma to deposit and thus form the metal oxide nano-wires.

4. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 1722

It is unclear whether the given sizes describe the defects that are not present in the nano-wires or the nano-wires themselves.

5. Claims 1-2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is unclear what the invention is. Does it make bulk quantities of crystalline non-catalytic low melting metals (preamble) or does it produce metal oxide nano-wires?

### ***Double Patenting***

6. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

7. Claims 1-2 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1- of copending Application No. 10/187,460. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims 1 and 2 of the present invention meet the limitations of claim 1 in the copending application.

It would have been obvious to one of ordinary skill in the art at the time of the present invention to expose a low catalytic metal (i.e. Ga, In, Sn, Zn, Al as per the current specification) on a substrate reacting that metal with a gas (oxygen and hydrogen) in a microwave to cause the formation of fibers (e.g. nanotubes) since this is what was suggested by the copending application.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
